Quiz Question 7

Missing genotype problem

- Most variant callers genotype all samples in one go. But:
 - variant calling process can become very computational intensive
 - new sample? Redo entire variant call
- GATK uses GVCF:
 - Store information on non-variant regions

Other software

- **freebayes**: haplotype-aware variant calling -> good alternative to gatk
- **bcftools**: working with vcfs (part of samtools)
- **vcftools**: working with vcfs
- **whatshap**: haplotyping
- **medaka**: SNP calling in Oxford nanopore data
